

FRONT END DEVELOPER SAMPLE WORKS INFO

BY Chanpreet S Rikhi

Dear Reader,

This document is being prepared to help you walk through the sample projects that I have created and are made available for your reference in the Google Drive. I would recommend you to please follow the steps if you are willing to run any of the projects made available :

The projects and their required info is attached for your reference:

1:Health Care Web Site...

Platform:HTML5,CSS3,Javascript

To run this web site you might want to look for **index.html** which when opened in browser like Chrome..

2:Tic Tac Toe Web Application:

Platform:HTML5,CSS3,Javascript,Jquery,Less,BootStrap

To run this application you need to make sure that you click **tictactoe.html** page and this web application should only be allowed to run in Mozilla Firefox as the Less stylesheet (Css3 Preprocessor) only been given privilege to run on firefox on local machines.....

3: Contact List Hovering :

Platform:Html5,Css3,Javascript

To run this application you will have to click index.html and this web application is made compatible with Chrome,IE and firefox

4.Jquery Based Form Application

Platform:Html5,Css3,Jquery,Regex Validation

To run this application you would need to click jqueryform.html that should be compatible with chrome,firefox.

5.Javascript Car Rental Page:

Platform:Javascript,Html5,Css3

To run this application you need to click the index .html and you can play around with the link more options that would help you provide further information regarding the car rental options made available.

6:Html 5 Local Storage Example:

Platform: Local Storage API,Html5,Canvas,Css3

To run the local storage example you may need to open the console of the browser to check out the retained values when entered by the user. To see the output you may need to open the index.html page

7:Html5 Based Shopping Cart Tracker:

Platform:Jquery Plugins,Html5,Css3,Javascript

This is a 4 page application which would allow the user or an agent to login using username:admin ,password :admin through index.html and if you want to observe the other pages like account management and business pages then you may have to open the pages separately using the following admin.html,createOrder.html,dashboard.html
